

## **Industry Support and Contacts for Mobile Trusted Platform Specification September 2006**

“As both a semiconductor and platform provider for mobile wireless devices, Freescale Semiconductor is proud to support the TCG and this first specification release of the Mobile Phone Platform Specification. We have been an active supporter and contributor to the TCG MPWG standards effort to ensure trust and owner privacy on embedded application platforms like cell phones. These standards will ultimately enable Freescale's security solution to offer a level of assurance and trusted interoperability that will pave the way to new frontiers of consumer confidence and commercial opportunity.”

Ken Hansen, Senior Technical Fellow and Director of Advanced Technology, Wireless & Mobile Systems Group, Freescale Semiconductor

“As mobile handsets continue to get smarter and network availability and services become ubiquitous, the ability to protect information, use content and handle transactions safely becomes increasingly important. Motorola believes that open standards for mobile device security, such as the new specification from Trusted Computing Group, are an effective way to provide data and device security that is interoperable and efficient for all participants in the value chain.”

Joe Hansen, Engineering Manager, Security Technology Center, Motorola, Inc.

“Nokia welcomes the new open specification developed by Trusted Computing Group's Mobile Phone Work Group. The mobile security specification represents a good opportunity for the entire industry as it enables developing a broader range of security-demanding services for mobile platforms.”

Kai Öistämö, Executive Vice President and General Manager of Mobile Phones, Nokia

“Open security standards are the best way to get the strongest possible solutions for network devices, such as mobile phones and PCs. As a trusted computing software and services provider, Wave Systems is excited to see the significant progress that has been made by the Trusted Computing Group, including this important milestone announcement by the TCG Mobile Phone Work Group encompassing specifications for a fundamental new security building block for cell phones.”
